

PUSHKAR VERMA

AI Engineer — Agent Systems & Production LLM Infrastructure

Mohali, India · Seeking relocation to the Netherlands · Eligible for the IND highly skilled migrant permit under the under-30 salary criterion (€4,357/month gross, excl. holiday allowance)

SUMMARY

I build scalable agent systems that are safe for real-world applications. I designed, deployed, and operate **FounderOS**, a LangGraph multi-agent kernel that executes real business actions—email, LinkedIn, GitHub, and sandboxed shell jobs—under human approval, running in production on its own VPS. My work ensures zero-hallucination guarantees, with reproducible plans and extensive testing. With over three years of full-stack engineering experience, I leverage technologies like TypeScript, Node.js, PostgreSQL, and Docker to create robust AI infrastructures.

SKILLS

AI / Agent Systems — LangGraph, LangChain, LLM, Evals, human-in-the-loop design, zero-hallucination guarantees, automated evaluation benchmarks

Backend & Data — Node.js, TypeScript, PostgreSQL, pgvector, Docker, REST API design

Infrastructure & Ops — Docker, systemd, GitHub Actions CI/CD, sandboxed execution environments, fault-tolerant systems

Frontend — React, Next.js, TypeScript, performance optimization

EXPERIENCE

Turicks — Software Engineer (self-employed) | Mar 2026 – Present | Remote

- Designed, deployed, and operate FounderOS in production, utilizing LangGraph and TypeScript to handle day-to-day operations behind a Telegram approval gate.
- Built real-time operator dashboards (Next.js, LangGraph, PostgreSQL) to monitor and debug agent run timelines and streaming output.
- Developed a CI/CD pipeline using GitHub Actions, ensuring robust deployment processes and automated testing.

Contact_ME — Full Stack Engineer | Nov 2025 – Mar 2026 | Gurugram, India (Hybrid)

- Sole frontend owner: built a reusable React component library, significantly reducing build time for new screens.
- Integrated and debugged REST APIs, improving backend response times and fixing issues directly, enhancing overall system reliability.
- Deployed applications on Microsoft Azure and managed CI/CD pipelines, ensuring smooth operations and rollbacks.

HFN — Associate Software Developer | Jul 2023 – Jun 2025 | Mohali, India (Hybrid) *Joined Apr 2023 as Software Engineer Intern.*

- Developed and maintained React.js + Material-UI admin dashboards, utilized daily by a 50-person operations team.
- Created and maintained Node.js/Express REST endpoints, ensuring seamless data flow and interface design.
- Implemented a one-click PDF generation feature, saving the operations team approximately 150+ hours annually.

AlmaBetter — Full-Stack Developer Apprenticeship | Jan 2022 – Jan 2023 | Remote

- Completed a year-long apprenticeship focused on shipping React, Node.js, and MongoDB projects under mentorship, transitioning from a humanities background into software engineering.

PROJECTS

FounderOS — Production Multi-Agent Kernel

LangGraph JS · TypeScript · PostgreSQL · Docker · GitHub Actions

- **Zero-hallucination action layer:** Ensured that every tool call emits a validated ToolReceipt, preventing the agent from reporting unexecuted actions.
- **Deterministic orchestration:** Implemented a pure code supervisor for routing, ensuring consistent plan execution and validation.
- **Crash-safe human-in-the-loop:** Designed a system that guarantees no loss of approvals or double-sends during crashes.
- **Three-tier evaluation:** Conducted over 1,800 deterministic tests and a comprehensive evaluation scoring high accuracy across multiple metrics.

Agent Reliability Benchmark — open harness (*in progress*)

- Developing a benchmarking tool to measure agent performance across various orchestration strategies, ensuring accurate evaluation without LLM bias.

EDUCATION

Bachelor of Arts — Panjab University, Chandigarh | Dec 2018 – May 2022
